

# Research Data Management in PalMod

## PalMod DMP Workshop

11. Feb. 2020

Karsten Peters

Deutsches Klimarechenzentrum (DKRZ)

# Why are we actually here?

# What are we talking about?

Research data management (RDM) refers to the organization, storage, preservation and sharing of data collected in a research project.

It involves everyday management of research data during a project's lifetime.

It also involves decisions and practices on data preservation beyond the lifetime of a scientific project.

The push towards reproducible scientific results and transparency in research has become particularly strong in the past 5 years.

# What are we talking about?

Research data management (RDM) refers to the organization, storage, preservation and sharing of data collected in a research project.

It involves everyday management of research data during a project's lifetime.

It also involves decisions and practices on data preservation beyond the lifetime of a scientific project.

The push towards reproducible scientific results and transparency in research has become particularly strong in the past 5 years.

# What are we talking about?

Research data management (RDM) refers to the organization, storage, preservation and sharing of data collected in a research project.

It involves creating a plan for how to manage data during the project.

It also involves preserving data throughout the project.

The push towards reproducible scientific results and transparency in research has become particularly strong in the past 5 years.

**Sounds like a top-down  
funder/data manager perspective**

# What's in for the scientists?

A (good) data management plan (DMP)

- Raises **awareness for data workflows** of (data intensive) research projects
- Contains clear **data handling procedures** facilitating intra-project collaboration
- Contains clear **attributions of responsibilities**
- Helps **avoid waste** of (IT-)resources, brains and time
- Serves as **reference document** for project relevant decisions, e.g. timelines

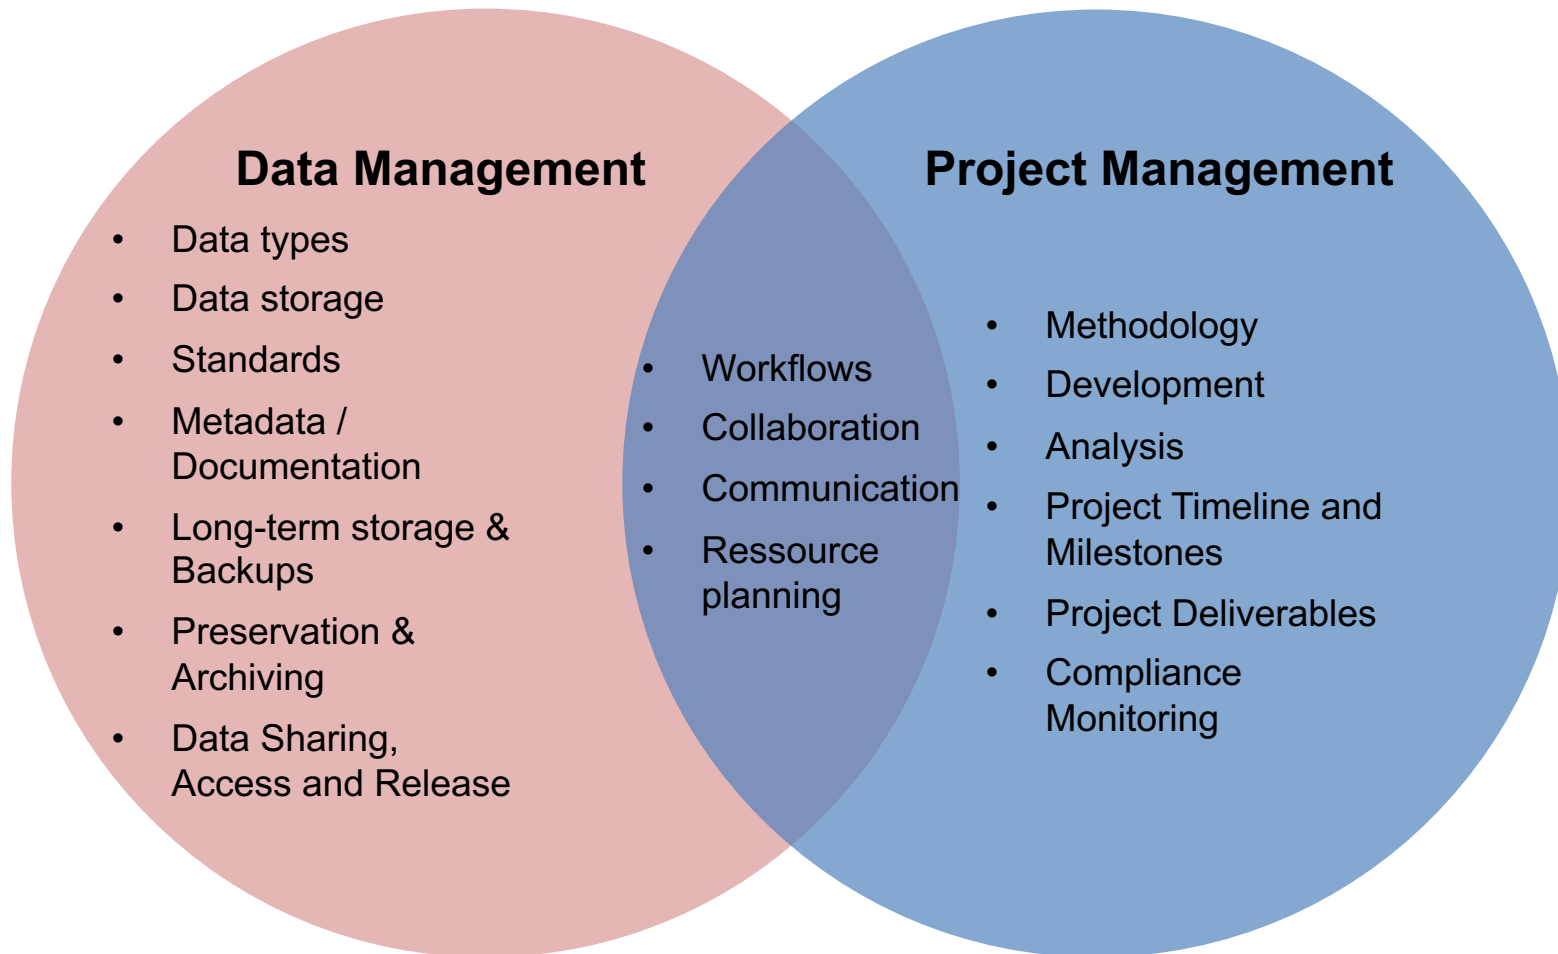

# What's in for the scientists?

**A good DMP supports  
effective  
project managament**

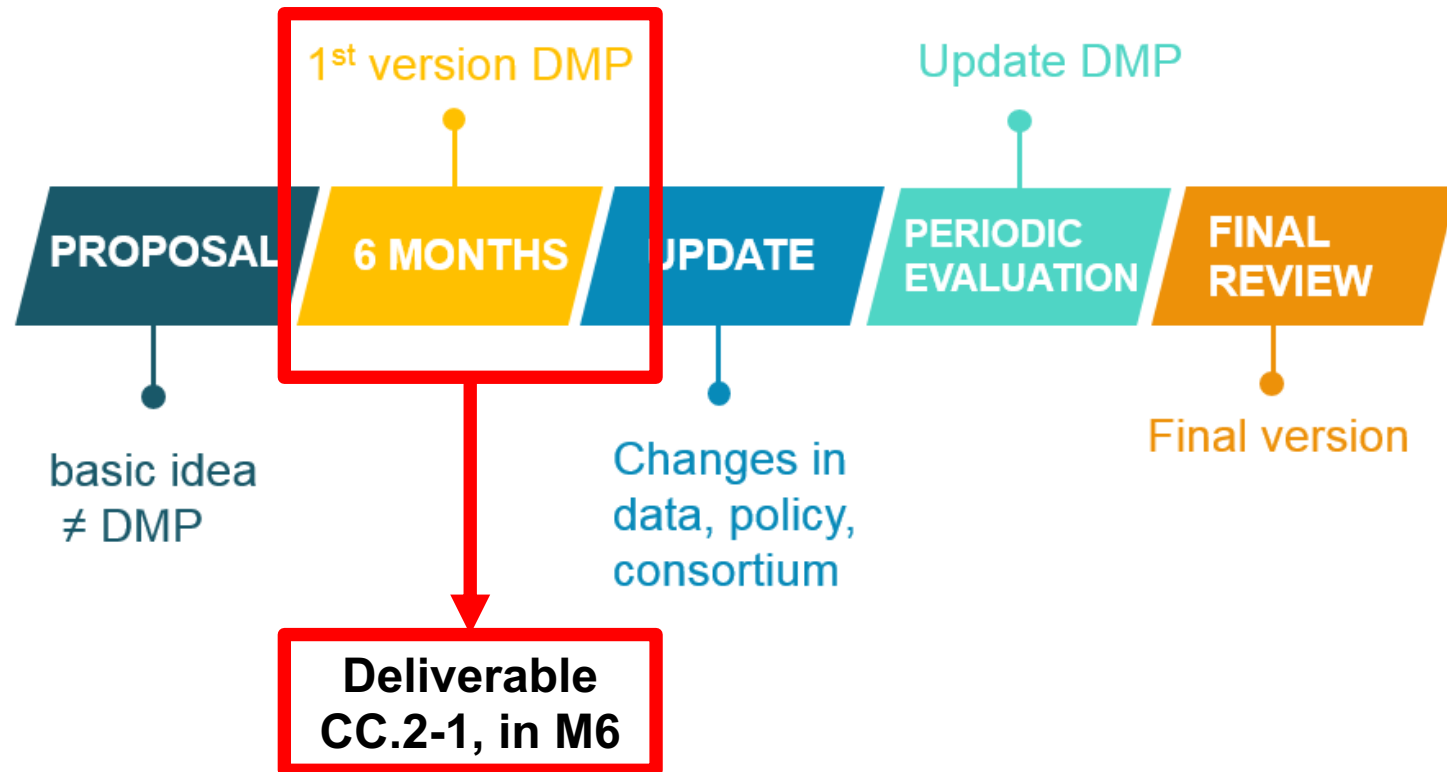

# Project Management and what is our role?

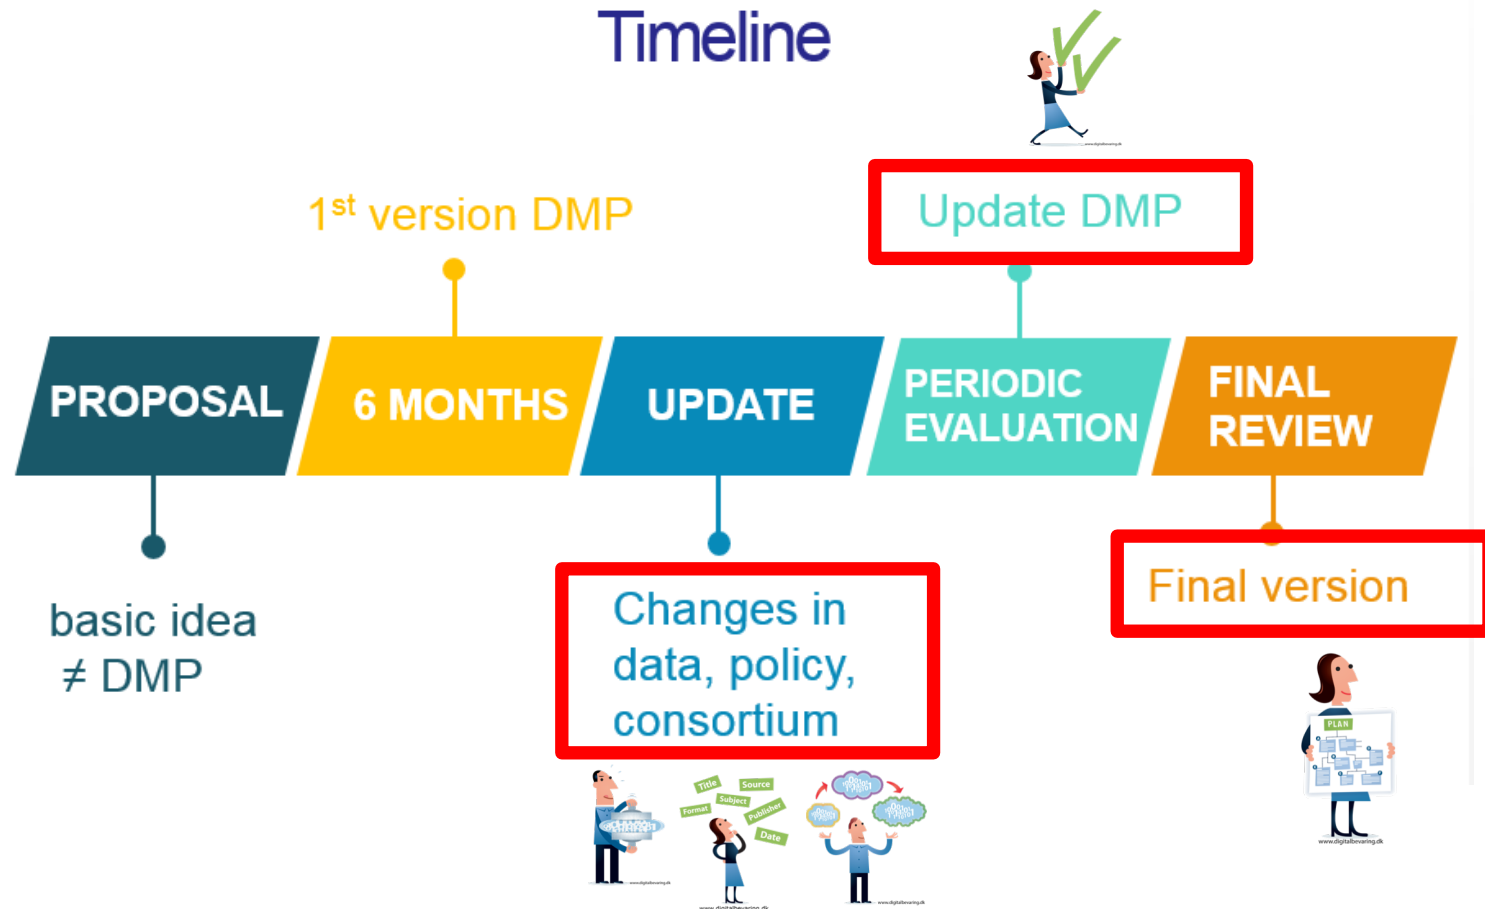

# Data Management Plan in the Project

## Timeline

<https://www.openaire.eu/when-do-i-have-to-create-a-data-management-plan>

# Data Management Plan in the Project

<https://www.openaire.eu/when-do-i-have-to-create-a-data-management-plan>

# What about RDM in PalMod?

Research data management covers the entire so-called „research data life cycle“

The **data management plan** serves to document the steps necessary to achieve this „life cycle“

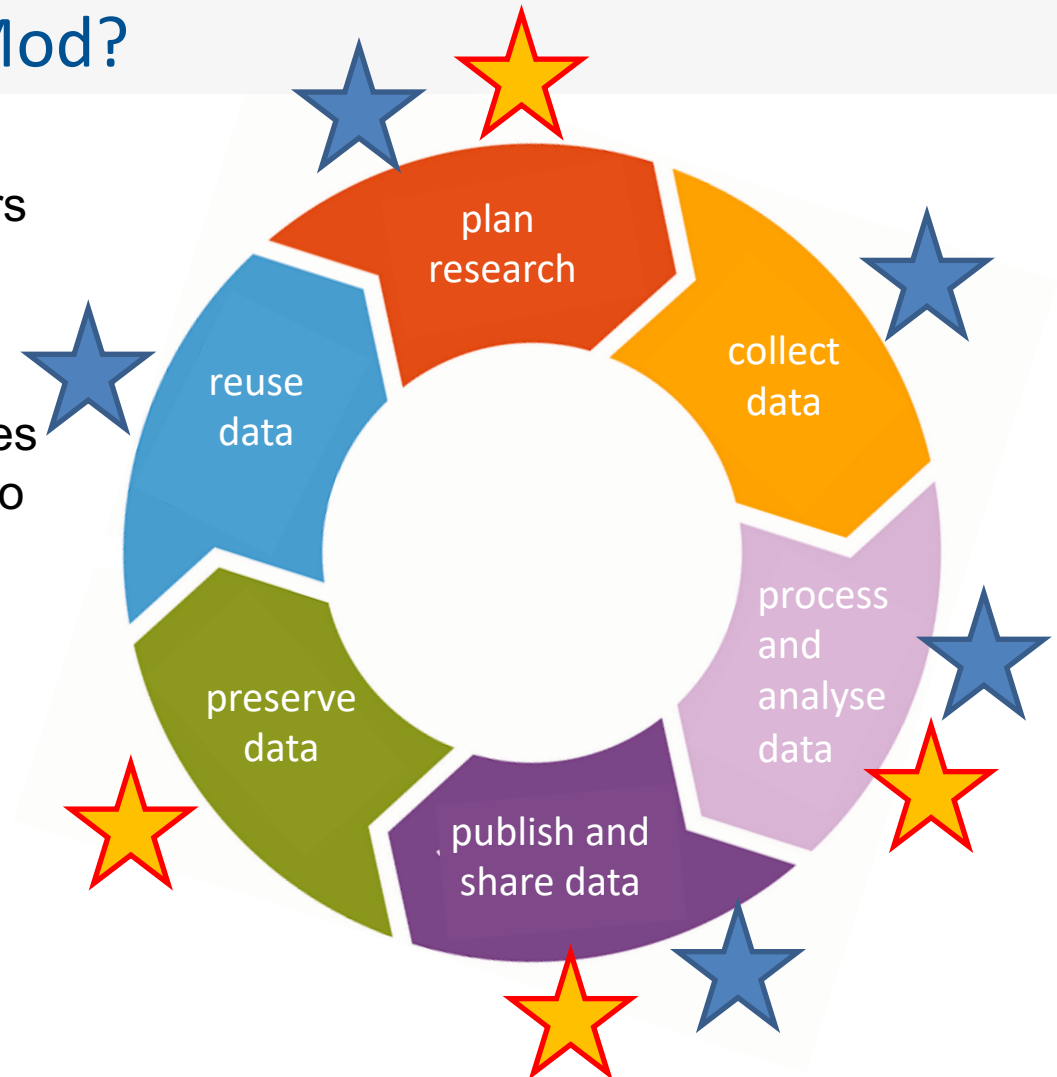

# What about RDM in PalMod?

Research data management covers the entire so-called „research data life cycle“

The **data management plan** serves to document the steps necessary to achieve this „life cycle“

★ **WG1-3, CC1**

★ **CC2**

# Data Management Plan for PalMod

## Goal

- Reference document for all data-related PalMod aspects
  - What data?
  - When?
    - Data user/data provider?
  - Who is responsible?
  - Where are the data?

**Establishment of a „community document“**
